Mednet System Signs Contract to use AM Technologies' WHY TYPE[®]
Medical System to Voice Enable their web based Electronic Medical Record
(emr4MD) Software

**The Speech Recognition System, used by Christopher Reeve, Combines with Mednet's
EMR to Increase Productivity and Eliminate Transcription Costs in Medical Practices**

NEWTON, Mass., and WEBSTER – May 25, 2005 – Mednet System, a leading provider of electronic medical record (EMR) software, announced today that it has selected AM Technologies' WHY TYPE[®] Medical System (WTMS) as the speech recognition system to enable 4MD software for patient notes.

Dr. Gulla, an internist and recent user of the system states, "I was surprised the recognition was so high even though I have an accent. I am obtaining 98 to 99% accuracy with my accent." Dr Gulla also said, "It integrates very easily with emr4MD."

According to Niraj Jetly, CEO, Mednet system, "this combination of the emr4MD and WTMS allows users to enter information without having to type or bear the cost of a transcriptionist. Their medical notes are created instantly and can then be sent to other doctors involved with the patients care."

"I am impressed at how quickly I was able to get the WTMS to voice activate my emr4MD," explains Dr. Kenneth Guarnieri, an internist and recent user. The integration of the WTMS with emr4MD will increase the medical community's productivity and efficiency. The conjunct system is complemented by expert training and support through both MedNet System and AM Technologies, Inc.

With this agreement, AM Technologies, Inc. becomes MedNet System's leading provider of computer-based speech recognition technology to physicians and medical personnel.

"We are honored MedNet System selected our company as the preferred vendor for computer-based speech recognition systems and are committed to continued outstanding service," said Andrew J. Meshulam, president, AM Technologies, Inc. "A number of specialists associated with MedNet System

already reap the benefits of WHY TYPE[®]'s reliability and accuracy – they are spending more time with their patients instead of laboriously typing medical notes. We look forward to our partnership with MedNet System as we enable patient care throughout medical practices and hospital networks.”

About Mednet System

Mednet System is the leading provider of practice consulting, medical billing, and IT consulting services to hospitals, IPAs, and physicians. Mednet System specializes in providing advanced data warehousing, utilization management, and disease management solutions by bringing together experience, collaboration and results all in one place.
